

Index to *The Orchid*

Review

Compiled by Clare Hermans & Johan Hermans

Dedicated to Robert Allen Rolfe, first editor of *The Orchid Review*

No comprehensive index had been compiled for *The Orchid Review*, the oldest continuously running orchid journal, until 2003. In that year, a subject and author index by the present compilers was included on a CD-ROM entitled *RHS Awarded Orchids*. Since then, the index has been continuously updated by Clare Hermans and Johan Hermans and is now available as this downloadable PDF.

The Orchid Review contains an encyclopedic amount of information about orchids. It covers subjects ranging from orchid hybrids and orchid cultivation to the history and people behind orchids, together with new scientific descriptions and nomenclatural findings. Right from the start the journal was well illustrated, and through the ages the most significant orchid people have contributed.

Many libraries, orchid societies and enthusiasts hold long runs of *The Orchid Review*. The only thing lacking has been a means to access this treasure trove of information without laboriously searching through the smaller indices of individual volumes. This comprehensive index now makes this possible. Given the size of the task, errors and omissions may have slipped through, for which we apologise.

Nomenclature and methods

In most instances orchid names have been indexed as printed, except where there was an obvious typographical or orthographical error. Some variations in nomenclature have been cross-referenced, based partly on the World Checklist of Selected Plant Families, the International Orchid Register and other major revisions of individual genera and regions. The only exception has been the slipper orchids; to avoid a complex double entry, *Paphiopedilum* and *Cypripedium* and their synonyms have been changed generically in accordance with current taxonomy.

Unregistered grexes (URGs), if expressed as a hybrid combination, have been routinely changed to their proper grex names if they were subsequently registered. Old spellings of hybrid genera have been standardised and cross-referenced, based on the *Handbook on Orchid Nomenclature and Registration*.

It was decided to omit cultivar names as inclusion would have made the index even more unwieldy, with limited benefit. Although all components of names were recorded in the background, indication of rank such as subspecies, variety and form have been omitted from the plant name, mainly because of their inconsistency and to aid digital sorting.

Illustrations are indicated with the page number in **bold**. Where an entry is covered over several pages, a dash is put after the page number. Names of orchid collections have been cross-referenced to their owner or grower.

Author index

The author index is as complete as possible. Indexing early volumes proved difficult as Robert A. Rolfe was the main contributor but did not always sign his contributions. A number of columns and articles have the initials of the author only; these could not be incorporated in the index unless the author was known.
